**DETAILED ACTION**

1. Applicant's election without traverse of Group II, claims 10-19 in Paper No. 5, filed 22 October 2002 is acknowledged.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

3. Claims 10-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Richter (U.S. 6,308,830 B1).

Richter teaches a foam layer with may have a lower density in an area of greater thickness and a higher density in a thin area (Figure 10e. The instant invention claims a thicker area with less dense foam. It would have been obvious to one of ordinary skill in the art to have selected the thicker less dense foam from those options given in the reference depending on final application. It is unclear what extra structure is implied by the wheel arch panel preamble of claims 17-19.
